

My information about this docket stems from the report to the FCC of Mr. David Halliday of Webster, New York whom I know to be a responsible, reliable and accurate observer of the trial of a BPL system installed in Penn Yan, NY. I must express my un-approval of the changes proposed in this docket without further testing. The NTIA first phase report just released adds much more doubt about the efficacy of the technical controls and business plans of this system. I urge the FCC to use its usual conservative caution in hearing all facets of this important issue. The FCC should not be allowing a layer of interference to smother licensed radio services important for homeland security. These include aviation, fire, police and amateur, and public utility radio services, in addition to reception of signals from overseas broadcasters.

Sincerely, Dwight Hill
